Life Before Computers

- *People did all calculations, typing, and record keeping manually.*
- *Offices were filled with paper, typewriters, and calculators.*

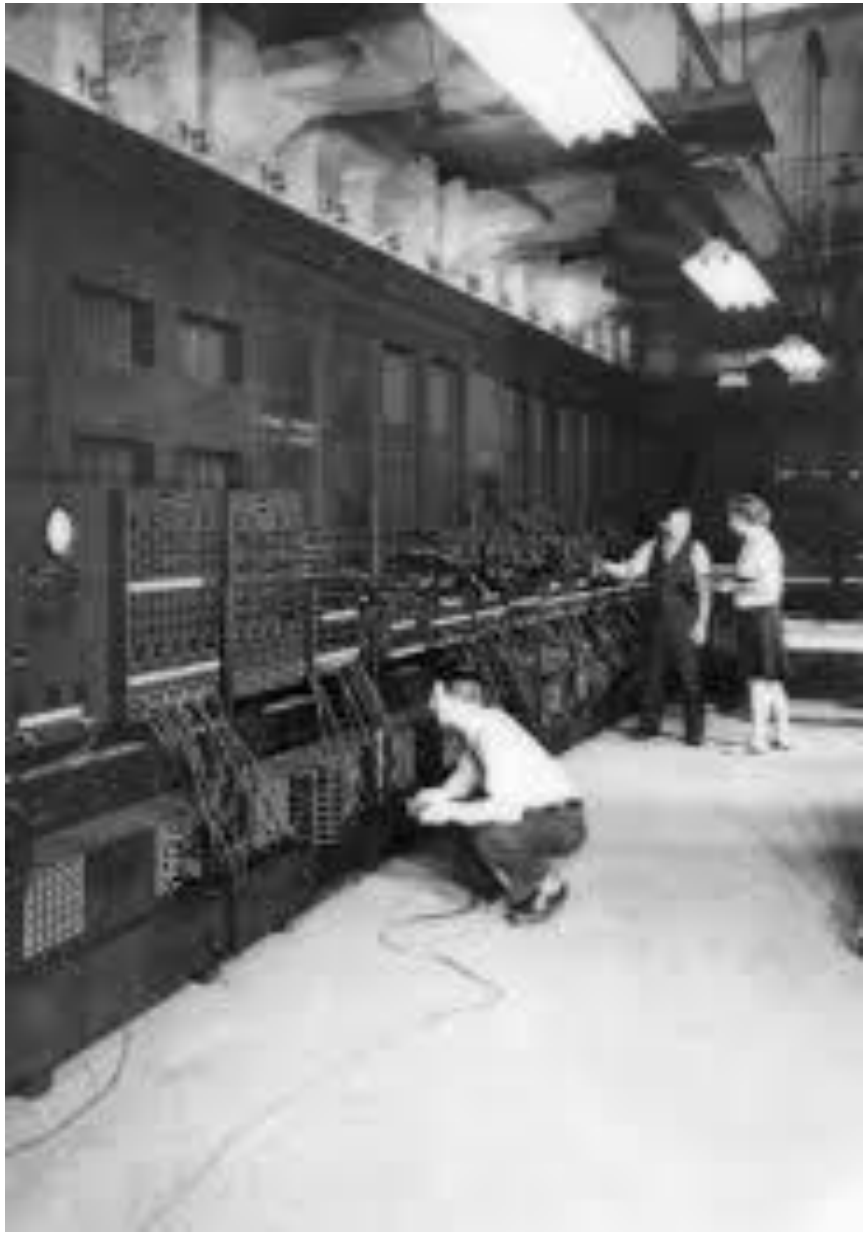
How Computers Were Born

- *In the 1800s, people wanted machines to count faster*

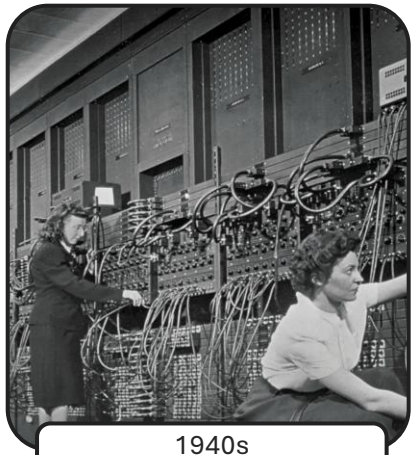
→ the idea of computers started.

- *First machines:* ***Abacus, Charles Babbage's Analytical Engine, ENIAC (1945)***

— giant machines with cables and switches.



A Quick Look at Computer History



1940s

First computers (ENIAC) were huge machines used for military & calculations

1970s

Microcomputers appeared (Apple I, IBM) – beginning of personal computers

1990s

Computers entered homes, MS Office was launched

2000s

Laptops, internet, and mobile devices became common

Now!

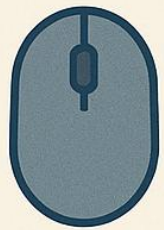
Touchscreens, AI, cloud computing, powerful smartphones

What is a Computer?

- *An electronic device that processes data*
- *Components: Input, Output, Processor, Storage*
- *Used in almost every field today*

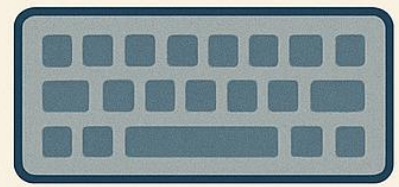
What Are Input Devices?

Devices we use to send data or instructions into a computer.



Mouse

Moves the pointer



Keyboard

Types letters and numbers

Microphone

Records sound

Webcam

Sends video

Touchscreen

Taps and swipes directly

What is Processing in a Computer?

Definition:

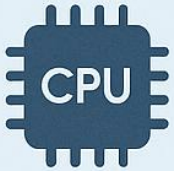
Processing is the action a computer takes to understand and work with the input to create meaningful outpu.

In Simple Words:

Processing is ile the brain of the computer thinking and making decisions.

Who Does the Processing?

- Calculates numbers
- Follows instructions
- Makes decisions based on input



CPU (Central Processing Unit) – Also called the “brain” of the computer

Factory Analogy (Quick Recap):

“If a computer is a factory, the CPU is the factory manager who decides what happens and when.”

What Are Output Devices?

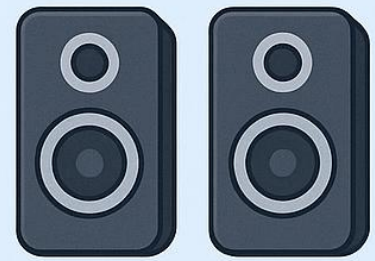
Devices that show or deliver the results of what the computer does.

Monitor

Displays text and grahics

Printer

Prints documents and images

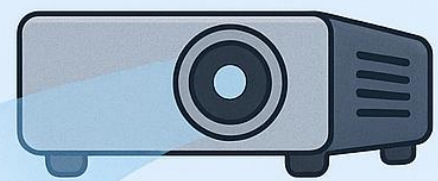


Speakers

Plays sound

Headphones

Outputs sound privately



Projector

Shows visuals on a wall/screen

What Are Storage Devices?

Devices that store and save data and information.

Hard Disk Drive

Stores data for long periods

Solid State Drive

Stores data for long periods

USB Flash Drive

Stores smaller amounts of data

CD/DVD Disc

Stores smaller amouns of data

How Computers Help Us

Writing letters

Sending emails

Making school projects

Managing money

Introduction to MS Office

- *A set of tools by Microsoft*
- *Helps with writing, calculating, and presenting*

MS Office Tools in Action

Word

Letters, résumés, reports

Excel

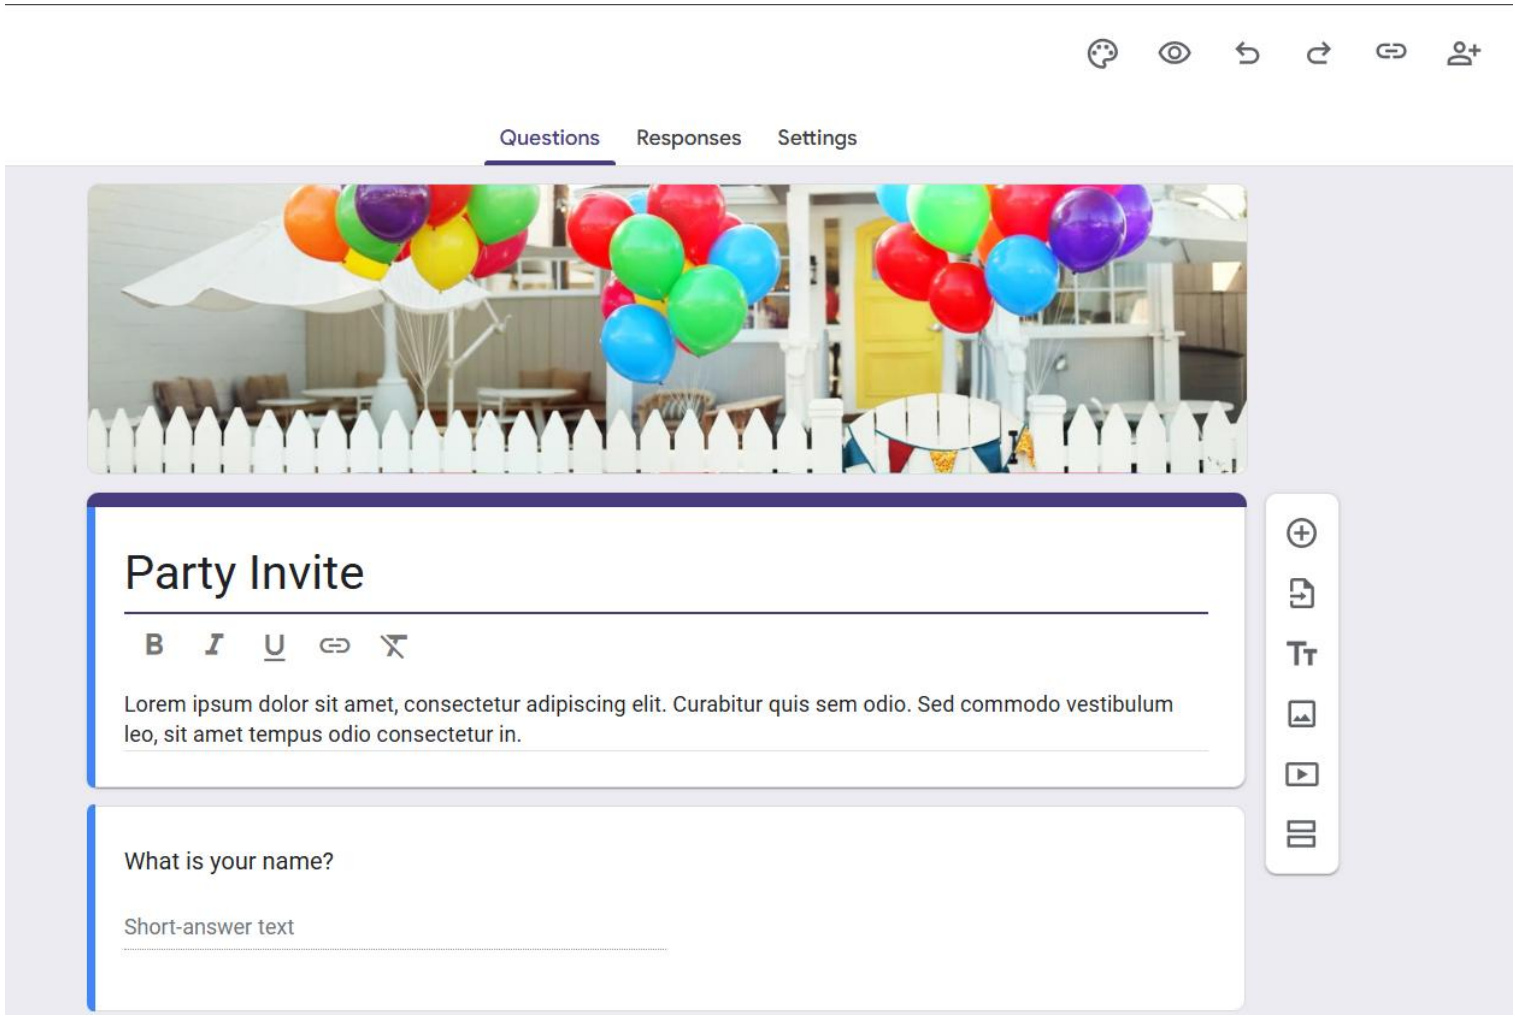
Budgets, data lists, simple calculations

PowerPoint

Presentations, slideshows

What is Google Forms?

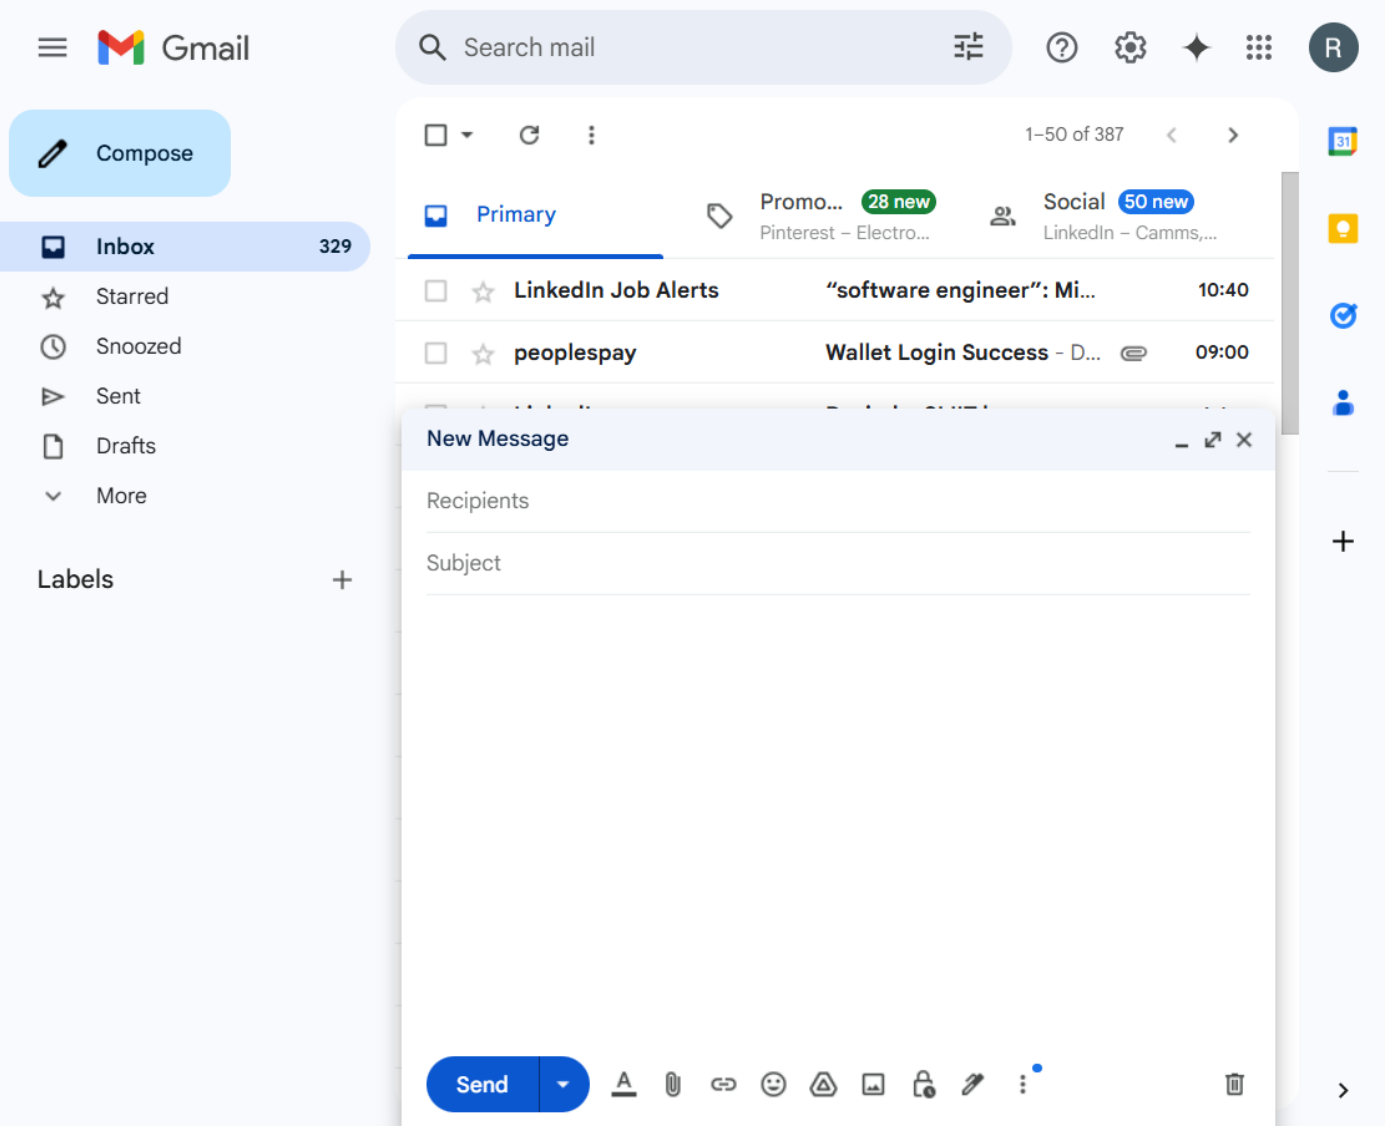
- *A free online tool by Google*
- *Used to create:*
  - Surveys
  - Quizzes
  - Feedback forms
- *Accessible via:* https://forms.google.com



What is Email?

- *Stands for Electronic Mail*
- *Used to send and receive messages or documents*
- *Requires an email address*

ravindusooriyaarachchi@gmail.com



What is Graphic Design?

- *Designing visual content to communicate*
- *Common outputs: Posters, flyers, social media posts*

Let’s Recap

- *What is a computer?*
- *What is MS Office used for?*
- *Why is graphic design useful?*
